

AWS Secrets Manager

AWS Secrets Manager helps you protect access to your applications, services, and IT resources without the upfront cost and complexity of managing your own hardware security module (HSM). It enables you to rotate, manage, and retrieve database credentials, API keys, and other secrets throughout their lifecycle.

Implementation Steps:

- 1. Open console and search Secrets Manager click on store a new secret**

- 2. Choose Secret type as Amazon RDS and credentials**

Choose secret type

Secret type [Info](#)

☒ Credentials for Amazon RDS database	☐ Credentials for Amazon DocumentDB database	☐ Credentials for Amazon Redshift data warehouse
☐ Credentials for other database	☐ Managed external secret Secrets vended by your third-party software vendor.	☐ Other type of secret API key, OAuth token, other.

Credentials [Info](#)

Username

admin

Password

☐ Show password

3. Encryption key kept as default

Encryption key [Info](#)
You can encrypt using the KMS key that Secrets Manager creates or a customer-managed KMS key that you create.

[Add new key](#)

Database [Info](#)

DB instance	DB engine	Status	Creation date (UTC)
No databases			

4. Configure Secret name

Configure secret
